The Rope Programme — Master Claim-Status Registry

One canonical source for the status of every principal claim in the external review set

Mark Palmer · with computational collaboration by Claude (Anthropic) · palmer100@gmail.com

This registry exists so the corpus can be evaluated without reading all of it at once. Every principal claim in the eleven-paper external set is listed once, with its status, the paper that carries it, what it depends on, whether it has needed correction, and whether an external test exists. Status labels follow the programme's convention:

Derived — follows by calculation from stated premises. EFT-constrained — fixed by effective-field-theory / symmetry reasoning, not first principles. Modeled — reproduced by an explicit construction consistent with data. Failed — shown not to hold as formulated (kept as a finding). Open — not yet established either way.

Tier 1 — In-Domain (Classical) Claims

Claim	Status	Paper	Dependency	Corrected?	Ext. test?
Rope effective metric = isotropic Schwarzschild (weak field)	**Modeled**	Gravity	Rope static config	No	GR-equiv
PPN $\gamma = \beta = 1$	**Derived**	Gravity	Effective metric	No	Cassini
Light deflection 1.751″; Mercury 43.0″/cy	**Derived**	Gravity	γ, β	No	VLBI, obs
Shapiro $\gamma = 1$; Nordtvedt $\eta = 0$	**Derived**	Gravity	Effective metric	No	Cassini, LLR
Two-slit intensity law $I \propto 1+\cos(2\pi\Delta/\lambda)$	**Modeled**	Optics	Light = rope wave	No	Classic optics
Classical diffraction (obstacle / needle)	**Modeled**	Optics	Wave superposition	No	Classic optics
Maxwell structure from rope tension/twist	**Modeled**	Electromagnetism	Rope kinematics	No	EM equiv
Magnetism: field near/far from one rope set	**Modeled**	Magnetism	Rope geometry	No	Oersted-type
Stiffness $K = T^2/(\kappa\, a)$ scalar; $2T^2/(\kappa\, a)$ director	**Derived**	Microscopic Mechanics	Coarse-graining	YES (was $3T^2$)	—
Coarse-grained action $S = (K/2)\int(\nabla\theta)^2$ justified at leading order	**EFT-constrained**	Renormalization/EFT	Power-counting	No	—
Thermodynamic coarse-graining & coefficients	**Modeled**	Thermodynamics	Rope statistics	No	—
Condensed-matter analogues (vortex/phase)	**Modeled**	Condensed Matter	Rope order params	No	Lab analogue

Tier 2 — The Quantum Boundary (Findings & Open)

Claim	Status	Paper	Dependency	Corrected?	Ext. test?

Local rope model gives triangle wave, CHSH ≤ 2	**Derived**	Non-Local Dynamics	Counting rule	No	Bell tests
Non-local update reaches cosine + Tsirelson (conditional IMPOSED)	**Modeled**	Non-Local Dynamics	Imposed cond.	No	Bell tests
No-signalling holds for the update rule	**Derived**	Non-Local Dynamics	Update structure	No	—
Config-counting gives (π−θ)/π, NOT Born $\cos^2(\theta/2)$	**Derived**	Measurement/ Born	Counting rule	No	—
Present counting form reproduces quantum entanglement	**Failed**	Measurement/ Born; Scope	Counting ≠ interference	No	Bell, g^2
Single-photon self-interference reproduced	**Failed**	Optics; Scope	Amplitude interference	No	g^2, single-photon
Detector couples to Bloch angle (γ = 1)	**Open**	Non-Local Dynamics	Measurement dynamics	No	—
Amplitude interference from rope dynamics	**Open**	Measurement/ Born; Scope	New structure needed	No	—
Non-classical rope substrate (future)	**Open**	Scope and Limits	—	No	—

Tier 0 — Ontology & Scope

Claim	Status	Paper	Dependency	Corrected?	Ext. test?
Interactions mediated by physical two-strand ropes	**Modeled**	Ontology/ Foundations	Core premise	No	—
Programme is a classical model w/ documented quantum boundary	**Derived**	Scope and Limits	Whole corpus	No	—
Boundary generalises to any counting ontology	**EFT-constrained**	Scope and Limits	Consistent w/ Bell	No	Bell

---

Reading the registry.

The single most important pattern: every Tier-1 classical claim is Derived or Modeled and needs no correction (the one historical correction, the stiffness factor of three, is marked and resolved). Every Failed entry is a quantum-boundary claim, kept deliberately as a finding rather than removed. Every Open entry is a quantum-sector question the programme does not claim to have settled. The corpus's honesty is legible directly from the status column: classical domain solid, quantum boundary documented, nothing overclaimed.

Programme credit: the core Rope Hypothesis is due to Bill Gaede. Computational collaboration and drafting by Claude (Anthropic). Correspondence to palmer100@gmail.com.
