

Rope Strand Dynamics: the Strand-Level Campaign

Mark Palmer · with computational collaboration by Claude (Anthropic)

Charlotte, NC · palmer100@gmail.com

Phase 1 (FND-STRAND-001): the substrate -- inextensible elastic curves with the derived finite contact energetics; circle relaxation; dynamical linking conservation with finite standoff on a true Hopf pair; unlinked control. Phases 2-4: framed transport (FND-KIN-001 fidelity), the coverage threshold (FND-MATTER-004 fidelity), and the interaction model (carrying the detection law and the measurement wall, per QB-022). This anchor grows with the campaign.

Naming note (5 September 2026). This programme is now the Mesh Programme and the theory it develops the mesh framework; 'the rope framework' in earlier revisions reads 'the mesh framework'. 'Rope' remains the name of the two-strand wound object, and the Rope Hypothesis credited to Bill Gaede keeps its name. Identifiers (repository, rope_solver, file names, claim IDs) are unchanged.
